

Overview

The project aims to create a unified technology stack that supports software- defined transformation, facilitates efficient domain adaptation and promotes innovation along Europe's value chains. The technology stack will be designed to meet the common needs of Europe's leading key application areas, promoting synergies and benefits throughout the entire value chain.

The opportunity

The Cynergy4MIE project presents an opportunity to address the inefficiencies arising from parallel development efforts in the ECS area. By proactively managing requirements from diverse key application areas, the project aims to guide developments in foundational technology layers and cross-sectional technologies.

Key Facts

- ❑ Coordinator: AVL

❑ Countries: 15

❑ Partners: 42

❑ Budget: 32,7 M€

❑ Start: 1 September 2024

❑ Duration: 36 months
